

Get a boost with Gustafson's HV2 Energy-Saving Residential Duct System

Did you know your home's duct system could be leaking as much as 40%? Not only does a leaky duct system mean the ventilation system is inefficient, but leaking ductwork can suck mold, dust, or insulation particles from the crawlspace and deposit them inside the house. This additional dust and mold can lead to health problems to you and your family. Gustafson's HV2 product line is for the next generation in households. Gustafson's HV2 pipe and fittings ensure tight fit giving you clean air and more money in your pocket!

- **R8 *Pre-insulated* gasketed ductwork**
- **Lowest duct leakage available on the market**
- **Cool your living space, not your attic**
- **Highest quality round steel duct system.**
- **Cleaner air—No dust or fiberglass will be sucked into the system.**
- **Allows your air-conditioning to run more efficiently.**
